Experience

Product Designer & Design Manager - Whova
Jan 2018 - Present

I currently manage the design team and work closely with the product and engineering managers to set the product direction for both our web and mobile products. My responsibilities include improving processes to make cross team communication easier and more efficient, hiring and mentoring junior designers and interns, and illustrating design ideas through user flows and prototypes using Sketch, inVision, and Principle.

Web Developer - Henry M. Jackson Foundation
Jun 2017 - Jan 2018

I worked on maintaining and improving the main portal sites. I updated the design and improved accessibility standards of the main survey portal. I developed features for the admin dashboard to increase efficiency for our team members.

Web Front-end Developer Intern - Whova
Sep 2016 - Mar 2017

I developed features from the mobile app onto a webapp version. I built a feature for users to embed their event agenda into their own website and outlined step-by-step instructions to assist in usage.

Web Portal Assistant - UCSD Health CRBS
May 2016 - Sep 2017

I fixed usability issues within the SciCrunch web portal and it's online documentation. I developed an internal bulk upload tool that allowed admins to make adjustments through an excel sheet.
